

# Endocrine disruptors

## REDUCE THE IMPACT ON OUR HEALTH

2020 is the perfect moment to tackle the problem of endocrine disrupting chemicals (EDCs) in Belgium: the issue is being dealt with by Belgian regional governments, it is part of the ambitious European Green Deal, and Belgium is currently drawing up a national action plan on endocrine disruptors.

Daily exposure to endocrine disrupting chemicals contributes to the development of diseases such as obesity, diabetes, certain cancers and fertility disorders.

What is the role of health care providers in raising awareness on this issue? How can authorities protect citizens, especially the most vulnerable ones, from the health risks associated with our exposure to health-harming endocrine disruptors?

**Register now to access the platform where the symposium will be streamed**

Participation is **free** of charge and **accreditation** has been applied for attending physicians.

**Simultaneous translation provided in French, English and Dutch.**

**Alain Maron**

Minister of Brussels, responsible for Environment and Health
